

5. Asset Entry Management

1.Create Asset

Primary Actor: BM at branch level, Asset manager at Head Office Level or other role at other office level.

BM has the privilege to create asset only on the branch working date.

Asset manager at Head Office can create asset only on system date.

Secondary Actor:

At Branch level

RMs have the privilege to create asset maximum up to 30 days back of branch working date.

DMs have the privilege to create asset maximum up to 90 days back of branch working date.

Admins have the privilege to any back dated transactions.

At Head Office level

Asset Admin of the respective office has the privilege to add asset to any previous date.

Precondition:

1. Systems have active asset item type
2. Users have the privilege to create asset.

Data Model: Asset

Sl. No.	Attribute Name	Data Type	Default Value	Range	Mand/ Opti	Data Capturing Method	Description	Validation
1	Asset Id	Numeric			M	System	Unique identifier of an asset	

2	Asset Tag/Id	Alpha numeric			M	System	Asset Tag/id	1. This field is unique, read only and auto generated as per the following format. 2. The format of the tag is Format will be changed to 'ASA-AssetType-Year-LocationId-AssetID'.(ASA-III-YY-OOOOO-DD DDDD) In the above format 'ASA' is constant - AssetType(III) is the defined Asset Short-name, not necessary it is 3 digits, - Year is The current Calendar Year (YY- Up to 2 last digit) YY' is last two digits of year of system date 'OOOOO' is the 5 digits of the branch/office code 'DDDDDD' is incremented number starts from 1 for each year and item. Example, suppose shamoli branch has purchased a chair in 2017 then the tag is ASA-CHR-17-02345-000001. It is visible in the UI. Note : Asset Last Digit is incremented in correspondence with Branch and Fiscal Year. And is reset on the Fiscal Year.
3	Item Type	Single Item Type		Active Item type list	M	user	Item type of the asset	1. It is mandatory.
4	Item category	Single Item category		Active Category list	M	System	Item category of the asset's item type	1. It is mandatory.
5	Asset Type	Single Asset type		IT asset/Non IT asset	M	System	Asset type of the category.	1. It is mandatory.
6	Purchased/Entry Branch/Office	Branch/office			M	System	First Owner/entry branch/office of the asset. Asset all types of financial transactions first time will be happened on this branch/office	
7	Current Branch/Office	Branch/Office			M	System	Current owner of the asset. any transactions will be made on the current branch/office.	When transferring an asset then the ownership will be changed.
8	Purchased/Entry User id	User			M	System	Who first time entry/purchase user of the asset	

9	Purchased/Entry date	Date	Branch working date for Branch office and System date for other office		M	User	First time entry/purchase date of the asset.	1. At branch level, Branch manager can enter a new asset on the branch working date. 2. At branch level, RM has the privilege to enter an asset maximum 30 days previous of branch working date. 3. At branch level, DM has the privilege to enter an asset maximum 90 days previous of branch working date. 4. At branch level, Admin has the privilege to enter an asset any previous working date. 5. At Head Office level, Asset manager can enter a new asset on the current system date only. 6. At Head Office level, Asset Admin has the privilege to enter an asset any previous system date. 7. Depreciation will be calculated based on this date. 8. Entry date will be always Branch working date and no user i.e RM/DM or any can't change this date.
10	Branch/Office working date	Date			M	System	For Branch, it is branch working date and for other office, it is system date.	
11	Supplier	Single selection	blank	Supplier list of the respective branch or office	M	User	Supplier of the asset	
12	Manufacturer	Single selection	blank	Manufacturer list of the respective branch or office	O	User	Manufacturer of the asset	Optional
13	Brand	text	blank		O	User	Brand of the asset	
14	Model	text	blank		O	User	Model of the asset	
15	Serial Number	text	blank		O	User	Serial number of the asset	
16	Specification	text	blank		O	User	Description of the asset	
17	Warranty Expired Date	Date	blank		O	User	Warranty Expired Date of the asset if have warranty of the asset	
18	Residual Value	Residual value of the asset	Inherited from Item type		M	User	Residual value of the asset	1. User cannot change the value. it is read-only
19	Useful Life	Useful life of the asset	Inherited from Item type		M	User	Useful life of the asset	1. User can change the value in asset entry level. 2. System will populate the useful life value from the row of the 'depreciation and useful life' matrix of the selected item type in which transaction/purchase/entry date between the effective from date and effective to date.
20	Expiry Date	Date	Purchased Date +Useful Life		M	System	Asset expiry date	After this date asset will not be depreciated.
21	Purchased Order/Work Order Number	Alpha Numeric	Blank		O	User		
22	Purchased Order/Work Order Date	Date	Blank		O	User		
23	Invoice Number	Alpha Numeric	Blank		O	User		
24	Invoice Date	Date	Blank		O	User		
25	Challan No.	Alpha Numeric	Blank		O	User		

26	Challan Date	Date	Blank		O	User		
27	Unit Billing Price	Numeric			M	System	Per item purchased Price of the Inventory. What value given by the supplier.	1. This value must be greater than 0.
27A	Total billing Price	Numeric			M	User	Unit Billing Price * Quantity	1. This value must be greater than 0.
28	Quantity	Numeric	1	Positive Integer	M	User	Number of Inventory.	Total payable=Unit Net Payable*Quantity
29	Purchasing Level	Radio Button	Local	(Local, Sales Center, Manufacturer)	M/O	User	The type of the supplier.	- Currently the field value would be captured when the category of the item is 'Furniture & Fixture' otherwise not. - If in future for other category or item type, this field value would be captured that come from vat mapping.
30	Is Vat Deductible?	Yes/No	Based on vat mapping		M	System	Vat would be deducted or not.	Currently read-only and based on vat mapping.
31	VAT Category	Single Selection	Based on vat mapping		M/O	System	Vat category of the item	Currently read-only and based on vat mapping. when 'Is Vat Deductible'=Yes then Vat Category other wise value is null/blank
32	Unit VAT Amount	Numeric	Based on vat mapping and calculation		M/O	System	Vat amount of the item billing price	- When Vat Category=Null/Blank then Vat Amount=0. - When there is Vat Category then VAT amount calculated as per Category Selection above. Vat calculation formula : VAT = the taxable amount × applicable VAT rate / 100 Billing Price- is included with VAT and Tax - if VAT and Tax applies to the item. - Vat Amount will be ceiling rounding. Such as 2.01, 2.49,2.99 values will be 3.
33	VAT Exemption	Yes/No		Yes,No,Null	O	User	Item is Vatable but Supplier has VAT Exemption Certificate	- When an item is not Vatable then this field value will be null. - When an item is Vatable then user can chose Vat Exemption Yes or No. - If User Chose Yes then Vat Category will be Null and Vat amount will be 0.
34	Mushak-11	Alphanumeric	blank		O	User	Mushak 11 form number.	- When an item is not Vatable then this field value will be null. - When Vat Exemption=Yes then Mushok-11 number must be blank. - When an item is Vatable then - If Supplier pays vat then must have to enter Mushok-11 number. - Muskok -11 number field length can be 4 to 20.

34A	Unit Vat Paid(Mushak-11) Amount	Numeric	Based on Organization settings.		M	System/User	When the supplier paid VAT, the VAT amount captured by this field	1. For All items, If 'Mushak-11'='No' or 'Vat Exemption ?'='Yes' or 'VAT deductible?'='No' then this field value =0. 2. a. For All items except Furniture & Fixtures category items, If 'Mushak-11'='Yes' then this field value =Vat% of Base Value b. i. For only Furniture & Fixtures category items, If 'Mushak-11'='Yes ' then this field value =7% of Base Value(the % value comes from organization setting). ii. From 1st July 2019, For only Furniture & Fixtures category items, If 'Mushak-11'='Yes ' then this field value =0% of Base Value(the % value comes from organization setting). The 7% was upto 30th June 2019. 3. Amount will be ceiling rounding. Such as 2.01, 2.49,2.99 values will be 3.
34B	Unit Vat Payable Amount	Numeric			M	System	The VAT amount deducted from the supplier bill.	Unit VAT Amount-(minus) Unit Vat Paid(Mushak-11) Amount.
35	Is Tax Deductible?	Yes/No	Based on Tax Mapping	Yes, No	M	System	The item is tax deductible or not.	Currently read only. based on tax mapping.
36	Tax Category	Single Selection	Based on Tax Mapping	Tax Mapping	M/O	System	Tax category of the item if tax deductible.	Currently read-only and based on Tax mapping. when 'Is Tax Deductible'='Yes then Tax Category other wise value is null/blank
37	Tax Amount	Numeric	Based on Tax mapping and calculation		M/O	System	Tax amount of the billing price of the item	3. Tax Amount will be ceiling rounding. Such as 2.01, 2.49,2.99 values will be 3.
38	Tax Exemption	Yes/No		Yes,No,Null	M/O	User	Item is Taxable but Supplier has TAX Exemption Certificate	1. When an item is not Taxable then this field value will be null. 2. When an item is Taxable then user can chose Tax Exemption Yes or No. 3. If User Chose Yes then Tax Category will be Null and Tax amount will be 0.
39	Unit Net Payable	Numeric			M	System	Per Item Net Payable amount to supplier.	1. Read only and calculation field. 2. The Unit Net Payable amount='Billing Price' - 'Unit Rounded Vat Payable Amount' - 'Unit Rounded Tax Payable Amount'. When Unit Billing Price is round then Unit Net Payable will be round value other wise not.
40	Total Net Payable	Numeric			M	System	Total Payable value.	Read only. =Unit Net Payable*Quantity

41	Purchased Method	Single Selection	Cash	1. Cash and Cheque 2. list values should be populated from the organization setting.	M	User	How the purchase is occurred.	
42	Bank Account	Bank Account	Current Bank Account of the Branch or Office	Active Bank account list of the branch or office	M/O	User	Bank Account Number is used for the purchased.	When purchase made by 'Cheque' then it is mandatory. And when purchased made by 'Cash' then it field value is blank.
43	Cheque Number	Alpha numeric	blank		M/O	User	Cheque used to purchase	When purchase made by 'Cheque' then it is mandatory. And when purchased made by 'Cash' then it field value is blank
44	Payment Date	Date	Entry Date	Derived from entry Date	M	System	- Currently hidden field in Data model. - Derived from Entry date.	
45	Cheque Date	Date	blank		M/O	User	Date of the cheque	When purchase made by 'Cheque' then it is mandatory. And when purchased made by 'Cash' then it field value is blank
46	Payment Date	Date	Entry Date	Derived from entry Date	M	System		- Currently hidden field in Data model. - Derived from Entry date.
The owner of the asset and location of the asset can be different. Suppose an asset purchased from branch fund but that can be uses in the district office. All of financial transactions/depreciation made on the owner office of the asset. Here ' Current Branch/Office ' field used for the ownership purpose. Location related fields is used for physical tracking of the asset.								
47	Location Office Type	Single value	Office type of current asset module is run	The list of values can be Branch Office/Head Office/Administrative Office/District Office/Zonal Office. The values will populate from organization setup.	M	User	Current location type of the asset	User can select different office type
48	Location Office Id	Single value	The asset module is run from which office/branch	Branch code/Head office Code/Administrative office Code/District Office Code/Regional Office Code	M	User	Where the asset is currently located.	1. The value can be current branch/office's any level parent/child office in the office setup tree of organization setting. Suppose current branch 'Shymoli's district is 'Dhaka' and region is 'Dhaka North'. user can select any of the offices but cannot select other's district or other zone.
49	Location Name	Name of the Office	The asset module is run from which office/branch	Branch Name/Head Office etc.	M	User	Where the asset is currently located.	
50	Location department/warehouse Id	Single Value	blank	If any department/warehouse attached to the selected office. It is set in the organization level.	O	User	The department/warehouse where the asset is located.	Most of the cases branches have no department/warehouse. Head Office have department and warehouses. Administrative Office/District Office can have warehouse or department.
51	Location department/warehouse Name	Name of the department or warehouse	blank		O	User		
52	Assigned Employee	Employee Id	blank	The list of active employee of the selected office.	O	User	If any asset is assigned to any specific employee.	1. Asset can only assign to the active employee of the selected office.
53	Purchased/Entry Batch Id	Numeric			O	System	When more than one asset are created at a time then system put a unique batch id for the each asset of the batch.	So, there should be a quantity field in the UI screen where system captures quantity. If this value is more than 1 then system will generate a batch id. System will separately create the number of quantity assets with the same batch id.
55	Files	Multiple files			O	User	User can attach multiple files such as image of the asset, Invoice, PO/WO etc.	User can attach or detach files

56	Status	Single selection	Active	List of status of the asset such as Active, Inactive,	M	User/System	Status of the asset	1. When an asset status is active that means asset is useable or used. 2. Depreciation will not be charged on inactive asset. And this asset is no longer attach to any branch 3. System will not allow to perform any operation/change attributes of an inactive asset except change status and flag.
57	Sub Status/Flag	Single Selection	In use	Active -> Inuse, Intransit, InStock, Reserved, InMaintenance InActive-> Disposed, Sold, Donate, Lost, Stolen			Flag of the asset	
58	Accumulated Depreciation Amount	Numeric				System	Total depreciated value of the asset	When depreciation run then the depreciation amount will be added to this field. When depreciation transaction post then field amount will increment with the depreciation amount and when reverse this field value decrement with the reverse amount of the depreciation transaction.
59	Last Depreciation Period	numeric				system	Last Depreciation period of the asset	The format of the field is yyyyymm. If an asset last depreciation charge month is august 17 then this field value is 201708. This field value change based on deprecation execution and reverse.
60	Written down Value	numeric				System	Asset current book value	Written down value is calculated by Purchased Price+VAT+Tax minus Accumulated Depreciation Amount. This field value also change by depreciation charge and reverse operation.
61	Current Fiscal Year Depreciation Amount	numeric				System	Current fiscal year depreciation amount of the asset	Suppose Accumulated depreciation of an asset is 3000tk and within 3000 1000 at 2017-2018 fiscal period and 2000 at 2016-2017 period. Value of this field will be 1000 because current fiscal period is 2017-2018. This field value also change by depreciation charge and reverse operation.
62	Disposal Date	Date				System	Disposal Date of the asset	
63	Created System Date							
64	Last Modified System Date							
65	Last Modified Branch/Office Working Date							
66	Last Status/Flag Change System Date							
67	Last Status/Flag Change Branch/Office Working Date							
68	Last Modified User Id

UI Description: Asset

UI Field	Field Type	Purpose	Default Value	Rule
Entry Date	Date	To capture the asset entry/purchase date in the system.	1. For branch office, it is branch working date; for head office, it is system date	As per data model. User can edit the date based on privilege.
Office Id	Single selection box	Asset current branch/office	This field will be populated based on from what office the asset module is using.	1. this field is read only
Asset Tag/Id	Text field	System will show the asset item id in this field.	When update, asset tag/id will be shown in this field, this value is the asset tag/id. When adding new asset tag/id will be created by the system then this field is blank.	1. The field is read only. 2. System will auto generate the item type id when adding as per data model.
Item Type	Text field	Item type of the asset	blank	1. this field's value is populated based on "Item type search" operation 2. It is mandatory and read only.
Item Type Search	button	To assign the item type of the asset. After clicking this button, system will show a popup window with active and permitted item type list. User select one item type from the list. The name of the item type will be inserted in the Item Type Name field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active and permitted item type in the list.
Asset Category	Text field	Category of the selected Item Type.	blank	1. this field's value is populated based on "Item type search" operation 2. It is mandatory and read only.
Asset Type	Text field	Asset Type of the selected Item Type.	blank	1. this field's value is populated based on "Item type search" operation 2. It is mandatory and read only.

Supplier	Text field	Supplier of the asset.	blank	1. this field's value is populated based on "supplier search" operation 2. It is mandatory and read only.
Supplier Search	button	To assign the supplier of the asset. After clicking this button, system will show a popup window with active and this branch/office supplier list. User select one supplier for the list. The name of the supplier will be inserted in the supplier field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active and this branch/office supplier in the list.
Manufacturer	Text field	Manufacturer of the asset.	blank	1. this field's value is populated based on 'Manufacturer search' operation 2. It is optional
Manufacturer Search	button	To assign the Manufacturer of the asset. After clicking this button, system will show a popup window with active and this branch/office Manufacturer list. User select one Manufacturer for the list. The name of the Manufacturer will be inserted in the Manufacturer field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active and this branch/office Manufacturer in the list.
Brand	Text field	To capture the brand of the asset	blank	1. Optional
Model	Text field	To capture the Model of the asset	blank	1. Optional
Serial No.	Text field	To capture the Serial No. of the asset	blank	1. Optional
Specification	Multi line Text field	To capture the description of the asset	blank	1. Optional
Warranty Expired Date	Date	To capture the warranty date of the asset if have any.	blank	1. Optional
Residual Value	Text field	Residual value of the asset. After selecting item type, this field value will be auto inserted by item type residual value.	Selected item type's residual value.	1. User cannot change the residual value. it is read-only. 2. Only numeric whole value.
Useful Life	Text field	Useful life value in year of the asset. After selecting item type, this field value will be auto inserted by item type useful life.	Selected item type's useful life value.	1. User can change the useful life value. 2. Only numeric whole value.
Expiry Date	Date	Expiry date of the asset. After this date depreciation will not be charged on the asset.	Entry/Purchased date + Useful life	As per data model
PO/WO	Text Field	To capture the Purchased Order. Or Work Order Number of the asset	blank	Optional
PO/WO Date	Date	To capture the Purchased Order. Or Work Order Date of the asset	blank	Optional
Challan No.	Text Field	To capture the Challan Number of the asset	blank	Optional
Challan Date	Date	To capture the Challan Date of the asset	blank	Optional
Invoice No.	Text Field	To capture the Invoice Number of the asset	blank	Optional
Invoice Date	Date	To capture the Invoice Date of the asset	blank	Optional
Billing Price	Numeric	Billing Price of the one inventory	blank	1. This value is greater than 0.
Quantity	Numeric	Number of the items	1	
Supplier Type	Radio Button List	To capture the type of supplier. there are 3 values such as 1.Local, 2.Sales Center 3.Manufacturer	Local	Currently enable and visible only for Furniture & Fixture Category which is Fixed Asset. When enable/visible that comes from vat mapping.
VAT Exemption	Radio button list(Yes,No)	To capture the supplier has vat exemption certificate if the selected item type is vat deductible.	when applicable then No otherwise null.	If item is vat deductible then this field would be visible/enable other wise not visible/enable and value will be null. If user has muskak-11 number then also not visible and value will be null.
Is Vat Deductible?	Check box	To distinguish between VAT Deductible and non deductible items	Based on vat mapping of the item type	Currently read only.

VAT Category	Single selection drop down box	Vat category of the item type	Based on vat mapping of the item type	Currently read only. If the item type is not Vat deductible then this field is blank
Unit VAT Amount	Numeric	Vat amount of the item if vat deductible	Based on vat mapping of the item type and calculation	Currently based on privilege read only. It will be ceiling rounded as per data model. Such as 2.01, 2.49,2.99 values will be 3.
Mushak-11	Text field	To capture the Mushak-11 number if supplier paid the vat.	blank	When a item type is vat deductible and and VAT Exemption is No then system will only capture the Mushok-11 number if supplier have other wise must be blank.
Unit Vat Paid(Mushok-11) Amount	Numeric	Vat paid amount by the supplier by Mushok-11	as per data model	If Vat amount =0 then it is 0. If Mushok-11='Yes' then this field value as per the data model. Currently based on privilege read only.
Unit Vat Payable	Numeric	The Vat amount deducted from the Billing price	as per data model	Unit Vat Amount - (minus)Unit Vat Paid(Mushok-11) Amount
Tax Exemption	Radio button list(Yes,No)	To capture the supplier has TAX exemption certificate if the selected item type is TAX deductible.	when applicable then No otherwise null.	If item is TAX deductible then this field would be visible/enable other wise not visible/enable and value will be null.
Is Tax Deductible?	Check box	The item type is tax deductible or not	based on tax mapping of the item type.	Currently read only
Tax Category	Single Selection Drop Down	Tax category of the item type	based on tax mapping of the item type.	Currently read only based on tax mapping of the item type. If the item type is not Tax deductible then this field is blank
Unit Tax Amount	Numeric	Tax amount of the item if tax deductible	based on tax mapping of the item type and calculation	Currently based on privilege read only. It will be ceiling rounded as per data model. Such as 2.01, 2.49,2.99 values will be 3.
Unit Net Payable	Numeric	Net paid amount to Supplier after deducting if Vat and Tax applicable	Calculation based Billing Price,VAT,TAX amount	Unit Net Payable='Billing Price' -(minus)Unit Vat Paid(Mushok-11) Amount -(minus)Unit Tax Amount. Currently based on privilege read only.
Total Net Payable	Numeric	(Unit Net Payable)*(Quantity)		read only
Written down value	Text field	(Billing Price minus (Accumulated Depreciation Amount)		Read only
Last Depreciation Period	Text field	Last depreciation Period		Read only
Accumulated Depreciation Amount	Text field	Total Depreciation		Read only
Current Fiscal Year Depreciation Amount	Text field	Current fiscal year depreciation amount		Read only
Purchased Method	Single Selection Box	To capture the purchased through cash or cheque.	Cash	1. System will populated the purchased method list values from the organization settings. It will be currently Cash and Cheque.
Bank Account	Single Selection Box	To capture by which bank account cheque the item is purchased.	Branch/Office active Current bank account	1. when 'Purchased Method'='Cash' this field will be not visible/enable and value will be blank. 2. when "Purchased Method" not equal to "Cash" this field will be visible/enable and all active bank accounts of the branch/office will be populated and user must select one.

Cheque Number	Text Field	To capture the cheque number of the bank account	blank	1. when 'Purchased Method'="Cash" this field will be not visible/enable and value will be blank. 2. when 'Purchased Method'="Cash" this field will be visible/enable and user put the cheque number,
Cheque Date	Date	To capture the date of the cheque.	blank	same as cheque number rules.
Location Office	Text field	To capture the physical location of the asset where it is used now	Current branch/office	As per data model. 1. Ready only and mandatory.
Location Office Search	button	To assign the physical location of the asset. After clicking this button, system will show a popup window with the valid office list as per data model rules. User select one office for the list. The name of the office will be inserted in the Location Office field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active and permitted office in the list as per data model.
Location Department	Text field.	To capture the location office's department/warehouse if it is used there.	Blank.	As per data model. 1. Ready only and optional
Location Department Search	button	To assign the physical department/warehouse of the selected location office to the asset. After clicking this button, system will show a popup window with the active department/warehouse list of the selected office as per data model rules. User select one department from the list. The name of the department will be inserted in the Department field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active department of the selected office in the list as per data model. 3. Location office may have no department.
Assigned employee	Text Field	To capture the assigned employee of the asset.	blank	1. Optional and read only.
Assign employee Search	button	Assign the asset to an employee. After clicking this button, system will show a popup window with the active employee list of the selected office as per data model rules. User select one employee from the list. The name of the employee will be inserted in the Assigned Employee field.		1. enable/disable based on action of the entity and user privilege. 2. In the selection popup window, system will show the active employee of the selected office in the list as per data model.
Flies	Multi files	To capture the P.O./ Invoice etc.		1. Optional. 2. When creating new asset, system will not permit to attach files. 3. after creating asset, user can attach file through the 'attach file of asset' operation/action
Status	Single selection box	Status of the asset.	Active	1. User can change status of the item type. 2. The list values are active and inactive.
Flag	Single selection box	Sub status/flag of the asset	In use	1. as per data model.
Disposal Date	Date	Disposal Date	blank	1. It is read only. It will automatically set when user disposal the asset
Save	Action button	To add or update the item type in the system.		Based on action and privilege, this button will be enable and disable.

Flow of Events:

1. user will select the asset list action from asset management module.

2. system will populate the asset list screen and user select the add button to create a new asset.
3. Disposal and Transfer button will be disabled when creating asset.
4. system will populate the asset entry screen as per the asset entry screen description.
5. user will enter the information as per UI description.
6. user cannot put the images when creating asset. User can put the images after creating asset by update operation.
7. user click the save button to create asset.
8. system will populate a message "Are you sure want to save the asset" with yes/no button.
9. if user press the yes button then system will create the asset as per asset data model and execute related transactions.

Post Condition

1. System will generate the transaction as per transaction data model and major field's description as below

Transaction Field	Value
Transaction Date	Payment Date
Branch Working Date	Branch/Office Working date
Transaction Type Code	Bought=1
Amount	Unit Billing Price
Payment Method/Process	Cash or Cheque based on selection
Accumulated depreciation amount	0
Particulars	Purchased
Vat Amount	"Unit Vat Payable Amount" field value If Mushok 11 number = blank then 'Unit Vat amount' field value otherwise if Mushok 11 number is 'not blank' then 0(zero).
Tax Amount	Tax field value

Business Rules

1. Entry date cannot be future branch working date for branch setup and cannot be greater than system date for head office setup.
2. If user put more than 1 in quantity field that means user wants to create multiple assets with same attributes then system will create multiple assets with the attributes.
3. Asset can be transfer, depreciate and disposal.
4. when creating an asset, asset status must be active but sub-status can be 'in-use', 'in-stock', "in-maintenance" **but not 'in-transit'**.
5. Currently Supplier Type(Local,Sales Center, Manufacturer) is applicable only for all Furniture & Fixture item of Fixed Asset and for all other item types is not applicable.

6. Following table is the validation mapping of the some fields

6a. For VAT

Purchasing Level	On Vat Mapping List	Vat Exemption	Mushok-11	Vat Deductible	Vat Category	Unit Vat Amount	Unit Vat Paid (Mushok-11) Amount	Unit Vat Payable Amount
Any or N/A	No	Null	Null	No	Vat Category as per mapping	0	0	Unit Vat Amount -(minus) Unit Vat Paid (Mushok-11) Amount.

Any or N/A	Yes	Yes	Null	No	Vat Category as per mapping	0	0	Unit Vat Amount -(minus) Unit Vat Paid (Mushok-11) Amount.
Any or N/A	Yes	No	Yes	Yes	Vat Category as per mapping	Value	1. for only Furniture & Fixtures categories items 7% of Base Price (Default) otherwise 'Unit Vat Amount'(Default) 2. From 01-Jul-2019 ,only for Furniture & Fixtures categories items 0% of Base Price (Default) otherwise 'Unit Vat Amount'(Default) . up to 30th jun 2019 it was 7%	Unit Vat Amount -(minus) Unit Vat Paid (Mushok-11) Amount.
Any or N/A	Yes	No	No	Yes	Vat Category as per mapping	Value	0	Unit Vat Amount -(minus) Unit Vat Paid (Mushok-11) Amount.

6b. For TAX

Purchasing Level	On Tax Mapping List	Tax Exemption	Tax Deductible	Tax Category	Unit Tax Amount	Tax Payable Amount
Any or N/A	No	Null	No	Tax Category as per mapping	0	0
Any or N/A	Yes	Yes	No	Tax Category as per mapping	0	0
Any or N/A	Yes	No	Yes	Tax Category as per mapping	Value	Value

7. Unit Net Payable Amount = (Billing Price) - (Vat Payable Amount) - (Tax Payable Amount)

8. Unit Vat Amount=(Base Price * Vat%)

$$\text{Base Price} = \{(\text{Billing Price}) / (100 + \text{Vat\%})\} * 100.$$

9. Unit Tax Amount= (Base Price* Tax%)

10. Currently if suppliers have Mushok-11 and Unit Vat Amount>0 then

1.
 - a. if only Furniture & Fixtures category's items,'Unit Vat Paid(Mushok-11) Amount'=7% of Base Price.
 - b. From 01-Jul-2019, if only Furniture & Fixtures category's items,'Unit Vat Paid(Mushok-11) Amount'=0% of Base Price it was 7% up to 30th jun 2019.
2. Except Furniture & Fixtures category's items,'Unit Vat Paid(Mushok-11) Amount'=Unit Vat Amount

10a. if suppliers have not submitted Mushok-11 or Unit Vat Amount=0 then

1.'Unit Vat Paid(Mushok-11) Amount'=0

10b. As per calculation if "Unit Vat Payable" Amount comes negative value then the value will be 0.

11. BM should have permission to enter multiple quantity of item.

12. Everywhere we need to show employee name with combination of employee code.

13. 'Maintenance flag should not use during item adding.

Example

Item Category	Billing Price	Is Vat Applicable?	Vat %	Is Tax Applicable?	Tax %	Is Mushok-11?	Mushok-11 %	Base Price
1	2	3	4	5	6	7	8	9={2/(100%+4)}

Furniture & Fixtures	12,900	Yes	7.5%	Yes	2%	Yes	0%	$=(12900/107.5)$ $=12,000$
Furniture & Fixtures	12,900	Yes	7.5%	Yes	2%	No	0%	$=(12900/107.5)$ $=12,000$
Except Furniture & Fixtures	13,200	Yes	if 10%	Yes	2%	Yes	10%	$=(13200/110)*$ $=12,000$

2.Delete Asset

Primary Actor: BM at branch level, Asset manager at Head Office Level or other role at other office level.

BM has the privilege to delete the asset which has created on the same branch working date.

Asset manager at Head Office can delete the asset only on the same system date created asset.

Secondary Actor:

At Branch level

RMs have the privilege to delete asset maximum up to 30 days back of branch working date.

DMs have the privilege to delete asset maximum up to 90 days back of branch working date.

Admins have the privilege to any back dated

At Head Office level

Asset Admin of the respective office has the privilege to delete asset to any previous date.

If a branch/office get an asset by transferring from another branch/office then only admin can delete the asset.

Precondition:

1. Asset status must be Active and sub-status cannot be "In-transit"
2. Users have the privilege to delete asset.

UI: Same as the asset creation.

Flow of Events

1. User will select the asset list action from asset management module.
2. System will populate the asset list screen and user click the delete button of the asset.
3. System will pop up a message "Are you sure want to delete the asset?" with YES/NO option. If user select YES system will delete the asset.

Post Condition

1. System will delete the asset from the database if the deleted branch working date and purchased branch working date is same along with all transactions.
2. System will reverse all the transactions related to the asset such as asset creation transaction, depreciation charge transactions, transfer transaction, receive transaction if any as per reversal rule.
- 2a. if the asset creation branch working date and delete operation's branch working is same then there is no need reverse transaction. System will just delete all the transaction related to asset because still no transaction of the asset would not posted to accounting module.
3. System will not show the deleted assets in the asset list window or asset register report.
4. System will save log in a different log table.

3.Update Asset

Primary Actor: BM at branch level, Asset manager at Head Office Level or other role at other office level.

BM has the privilege to update the asset which has created on the same branch working date.

Asset manager at Head Office can update the asset only on the same system date created asset.

Secondary Actor:

At Branch level

RM's have the privilege to update asset maximum up to 30 days back of branch working date.

DM's have the privilege to update asset maximum up to 90 days back of branch working date.

Admins have the privilege to any back dated

At Head Office level

Asset Admin of the respective office has the privilege to update asset to any previous date.

If a branch/office get an asset by transferring from another branch/office then only admin can update the asset.

Precondition:

1. Asset status must be Active and sub-status cannot be "In-transit"
2. Users have the privilege to update asset.

UI: Same as the asset creation.

Flow of Events

1. User will select the asset list action from asset management module.
2. System will populate the asset list screen and user click the update button of the respective asset.
3. System will populate the asset screen with the asset attributes in the respective fields on the asset entry screen.
4. System will disable the "transfer" and "disposal" operations.
5. User change the fields as per data model, UI description.
6. User click the save button to execute changes in the asset.
7. System populates 'Are you sure want to update the asset?' with YES/NO options. If user selects YES then system will update the asset as per Asset data model.

Post Condition

1. System will reverse all the transactions related to the asset such as asset creation transaction, depreciation charge transactions, transfer transaction, receive transaction if any as per reversal rule. System will also create new transactions for creation, depreciation, receive and transfer.
 - 1a. if the asset creation branch working date and update operation's branch working is same then there is no need reverse transaction. System will just update all the transaction related to asset because still no transaction of the asset is not posted to accounting module.
2. System will save the change log in the asset log table.

Business Rules

1. User cannot set "expiry date" less than current branch working date for branch and system date for other office.
2. User cannot change the "Quantity" field.

3. User cannot change the "Status" field.

4. User can change sub status among "in-use", "in-stock" and "in-maintenance" but not set to 'in-transit'.

5. User cannot change "Asset Id" and "Item Type"

6. User cannot change 'Branch/Office'.

7. User cannot change 'Entry date'.

8. If user changes 'Unit Purchase Price', 'Unit Vat Amount', 'Unit Tax Amount', 'Purchase Method', "Bank Account" then reverse transaction and new transaction may need if the asset creation branch working and updating branch working date are not same.

8a. All other fields which are not included in point 8 there is no need for reverse transaction and new transaction.
